Recruitment Strategies by Prospective Student Group

Results of NACAC’s 2018–19 Admission Trends Survey indicate that institutions use a wide variety of recruitment methods to connect with prospective students. Contacting students through email and engaging with them through the institution’s website or by hosting campus visits were the most important recruitment strategies that colleges and universities used for first-time freshmen. An additional four factors were each rated as considerably important by at least half of survey respondents. They were high school visits (63 percent), direct mail (50 percent), and outreach to parents and high school counselors (55 percent and 54 percent, respectively) (see Table 4).

Early Decision

Twenty-five percent of respondents to NACAC’s 2018–19 Admission Trends Survey offered Early Decision (ED). Private colleges were more likely than public institutions to offer Early Decision programs (37 percent compared to 5 percent), as were selective colleges.1 More than half (56 percent) of the most selective colleges (those accepting fewer than 50 percent of applicants) had an Early Decision application option. (See Appendix C for a detailed description of Early Decision and Early Action policies.)

Early Decision applicants represent only a small portion of the total applicant pool at colleges that have ED policies. Only 6 percent of all applications for Fall 2018 admission to ED colleges were received through Early Decision. The proportion of all applications received through ED increased with the admission selectivity rate and yield rate.2

As expected, colleges with Early Decision policies reported a higher acceptance rate for their ED applicants as compared to all applicants (61 percent versus 49 percent). Given the binding nature of Early Decision policies, the average yield rate for Early Decision admits was 90 percent, substantially higher than the average yield rate for all students admitted to ED colleges (25 percent) (see Table 5). Colleges with lower total yield rates tended to admit a greater percentage of their ED applicants compared to those with higher yield rates.3 More selective colleges tended to have higher ED yield rates.4

---

1 Chi-squared test for Early Decision policy and: institution type ($X^2 (1) = 55.8, \text{Phi} = .366$), $p < .001$; Correlation (Spearman’s Rho) for Early Decision policy and acceptance rate ($-.371$), $p < .001$.

2 Correlation (Pearson’s R) for percent of apps received through ED and: acceptance rate ($-.333$); yield rate ($+.439$), $p < .01$.

3 Correlation (Pearson’s R) for institutional yield rate and ED acceptance rate ($-.617$), $p < .01$.

4 Correlation (Pearson’s R) for institutional selectivity rate and ED yield ($+.727$), $p < .01$.

— No respondents chose this option.

Between Fall 2017 and Fall 2018, colleges reported an average increase of 11 percent in the number of Early Decision applicants and 10 percent in ED admits. In a prior survey, colleges also had reported increases in ED applications and ED admits between Fall 2016 and Fall 2017 (4 percent each).

**Early Action**

Thirty-eight percent of four-year colleges offered Early Action plans, according to results of the 2018–19 Admission Trends Survey. Colleges with lower yield rates were more likely to offer Early Action.\(^5\) Forty-six percent of colleges with yield rates lower than 30 percent used Early Action.

For Fall 2018, 45 percent of applications to colleges that had Early Action admission plans were received through EA. Similar to the pattern with Early Decision, colleges with Early Action accepted a greater proportion of EA applicants when compared to the overall applicant pool (73 percent versus 64 percent). Unlike Early Decision, Early Action did not provide a significant benefit to institutions in terms of yield rates. The average yield rate for EA admits was nearly identical to that of the overall applicant pool (25 percent and 24 percent, respectively) (see Table 6).

From Fall 2017 to Fall 2018, the number of Early Action applications increased by 10 percent and the number of students accepted through EA increased by 9 percent, on average. Colleges also had reported average increases in EA applications and EA admits between Fall 2016 and Fall 2017 (9 percent and 10 percent, respectively).

\(^5\) Correlation (Spearman's Rho) for Early Action policy and institutional yield rate (.254), p < .001.
**Wait Lists**
For the Fall 2018 admission cycle, 43 percent of institutions reported using a wait list. Private institutions were more likely than public colleges and universities to maintain a wait list (48 percent compared to 34 percent). Both colleges with lower enrollments and those with lower acceptance rates also were more likely to use a wait list.\(^6\) Eighty-two percent of the most selective institutions (accepting fewer than half of all applicants) maintained a wait list.

Institutions reported placing an average of 10 percent of all applicants on the wait list for the Fall 2018 admission cycle, and an average of 50 percent of waitlisted students opted to remain on the wait list. Colleges with lower acceptance rates placed a greater proportion of students on wait lists, on average.\(^7\)

Institutions admitted an average of 20 percent of all students who chose to remain on wait lists. Selective colleges were least likely to admit students from a wait list.\(^8\)
